Download

The name of the.zip file is the same as the name of your game, and the patch will be installed along side your game when the patch is run (In the case of a No-CD/No-DVD patch you can see the message "Installing.zip patch file" if the patch is applied successfully). My games don't show on game list: If you have problems listing your games on the game list, please ensure that the No-CD and No-DVD patches work. If they do work, then the cause for this problem can be a corrupted patch cache. Please try a full clean install (go to the main menu, press Y, select option to download all patches and reinstall them). My game says it is missing the.sgi file: Sometimes when the patch requires a game to be running, it may be asking for the.sgi file. If that is the case, please ensure that you have the latest game files from the ZDoom forums. Miscellaneous Problems The following is a list of problems that I can't fully cover: Missing sound: The most common problems with sound are A) sound is missing during

certain cutscenes or B) the sound is working but sounds do not play the correct volume. Missing models: In most cases, the models will not be installed as part of the No-CD/No-DVD patch. When a model is not installed it is referred to as a "missing model" and is installed in the main directory. Logging a zdoom.zip file: The logging of a.zip file usually ends with a long list of codes. A list of all the codes can be found here: Missing Dependency Patch: The last patch in the series. Some patches require at least one other patch to be installed, but some do not. If a dependency is missing, an error message will be shown and the game will not be run (In the case of a dependency patch you can see the message "Installing.zip patch file" if the patch is applied successfully). Other possible problems: If you run into any other problems that are not mentioned in this post, I can try to help you out. Please leave a comment and I will reply to your comment as soon as I can. On Windows Step 1: Open 82157476af
